

Provide valuable information to your patients and increase revenue to the practice.

Enable patients visiting your office to browse services and procedures offered, view and purchase skin care products and enjoy their favorite music or video using a customized wireless device.

▪ **Increase Revenue to the Practice**

Differentiate your practice by offering a patient amenity that can increase revenue and provide improved personalized attention. Patients can now view and learn more about the services offered and have the option to add additional services to their visit. Patients can also order retail items offered conveniently from a personal handheld device and have them ready for pick up when they check out.

▪ **Provide Valuable Information**

The Tiare solution provides valuable information to the patient regarding the practice. Tiare's solution provides the ability for the practice to communicate directly with the patient.

- Inform patients about services and procedures
- Notify patients of special offers
- Provide information about the physician and the practice
- Share press articles and video about the physician and practice
- Allow patients to view and purchase skin care products and other goods

▪ **Enhance Patient Experience**

Patients will no longer sit idle while waiting for services or post operative. Patients can explore the array of services the practice offers, make inquiries regarding specific treatments and sign up to receive more information on services. Patients can also make purchases from the retail offerings available at the office. The solution also provides music and video to the patient during their visit.

▪ **Easy Deployment and Maintenance**

Patients receive a device when they arrive to your office or can download a free app from their own iPhone when they arrive. Staff can retrieve devices when patients have completed their visit. Your Tiare concierge can provide content updates and technical support anytime, 24 hours a day, simply call and make a request.
