

Patented intelliChaise® Personal Ordering System available on Apple iPhone & iPod touch

Guests can now use their own iPhone or an iPod touch provided by the property. Ordering food, beverages and services has just become easier.

▪ **An Elegant Amenity for the Guest Offering a Highly Personalized Service Experience**

The intelliChaise® system allows guests to order food & beverages directly from their chair at the pool, beach or any selected venue. Featuring proprietary software, guests benefit from faster service, greater control over service, increased convenience and improved personalized attention. Guests who need immediate attention need only press the "Call Server" button to page staff.

▪ **Increase Revenue and Provide Service Efficiencies**

The intelliChaise system allows the venue to take greater advantage of revenue opportunities:

- ❖ Up sell beverage selections to the guest
- ❖ Display Cocktails and wine offerings
- ❖ Provide detailed photos and descriptions
- ❖ Highlight specialties and promotions
- ❖ Eliminate lines and waiting at concession stands

The system's custom dashboard on the Apple iPod touch staff unit provides access to guest information such as order history and preferences, allowing staff to offer a highly personalized service experience. The staff unit also provides for service efficiencies, informing staff when orders are ready for pick up at the kitchen and bar. The staff unit can also be used to place orders directly to the POS.

▪ **A Valuable Yield Management Tool**

Trying to fill an available spa, show or restaurant opening? The intelliChaise system can send information out to the guest promoting specific venues, activities and services. Information can be sent to all guests or target specific guests based on guest preferences.

▪ **An Eco Friendly Platform Capable of Real Time Updates**

Never present guests with a choice that's out of stock. The intelliChaise system provides the ability to update the information in real time allowing for more efficient management of menus. This flexibility allows F&B to take advantage of surplus inventory, remove items that are not moving, and temporarily hide items that may be out of stock. Eliminate the printing and distribution costs of a traditional menu while helping the environment.
